

ISTVÁN KISS

Mechanical Technician

Kralovske Udolie 6, Bratislava, Slovakia • +353 87 160 6950 • istvank896@gmail.com

PROFESSIONAL PROFILE

Mechanical technician with over 20 years of hands-on experience maintaining, repairing, and supervising machinery across automotive and industrial manufacturing environments. A consistent pattern across every role: called in when equipment keeps breaking down for reasons no one has pinned down, diagnosing the actual root cause, and putting a fix in place that stops the failure from recurring — rather than a temporary patch. Comfortable owning that from the tools up to the paperwork: fault diagnosis, sensor and safety-device installation, robot programming and calibration, and the quality documentation and KPI tracking that keeps a plant audit-ready. Has led maintenance teams directly and worked daily across Czech, Slovak, and Korean management structures. Programs KUKA (KRC4), YASKAWA, and ABB industrial robots.

CORE COMPETENCIES

Technical Skills

- Robotics programming, calibration & troubleshooting: KUKA (KRC4), YASKAWA, ABB
- Root-cause diagnosis and permanent-fix repair of CNC, press, laser and welding machines
- Sensor and safety-device installation; continuous equipment monitoring
- AGV system diagnosis and troubleshooting (navigation, sensor, comms, battery)
- Hydraulic press, pneumatics and pump servicing
- Technical documentation, quality control & safety compliance

Software & Systems

- SAP – Production & Warehouse Management
- Oracle & Intronix – data management and QA
- Microsoft Office – Excel & Word

Languages

- Hungarian – Native • Serbian – Native/Fluent
- English – Intermediate • Czech – Intermediate

Interpersonal Skills

- Strong communicator with a collaborative, hands-on leadership style
- Dependable and adaptable under pressure, including tight production deadlines
- Proactive problem-solver focused on eliminating repeat failures, not just clearing alarms
- Cross-cultural experience managing and reporting across Czech, Slovak, and Korean teams

CAREER HISTORY

Hotel Technician — Hotel SOREA, Slovakia

January 2024 – January 2026

- Performed routine maintenance and repairs across electrical, plumbing, and HVAC systems, keeping guest-facing infrastructure running with minimal disruption
- Conducted regular inspections to catch faults before they affected operations, rather than reacting after the fact
- Provided technical support for events and congresses — preparing facilities in advance and staying on hand to resolve issues in real time during live events
- Reported and resolved faults on technological devices; coordinated with colleagues so maintenance work didn't collide with hotel operations

Machine Mechanic — SALTEN N950, Norway

June 2023 – December 2023

- Carried out full servicing of Bader 144 machines, including bearing and bushing replacement, to maintain equipment availability and avoid unplanned downtime
- Diagnosed and resolved electrical, mechanical, pneumatic, and sensor-related faults on robotic production cells
- Ran root-cause analysis on recurring equipment failures and implemented corrective actions so the same fault didn't keep coming back
- Performed preventive maintenance on pumps, and trained new robotic operators on machine operation, troubleshooting, and safety procedures

- Assisted with robot programming adjustments, calibration, and optimization to improve production efficiency and product quality
- Maintained air and cooling systems to keep machines running at optimal performance

Logistic & AGV Technician — *Forvia, Czech Republic*

March 2021 – May 2022

- Diagnosed and resolved navigation, communication, sensor, and battery faults on AGV systems, and made manual interventions to keep material transport moving
- Responded rapidly to equipment alarms and breakdowns to minimise disruption to the production line
- Ran preventive maintenance inspections and system tests aimed at reducing unexpected failures, not just fixing them after the fact
- Traced recurring AGV faults to their root cause and implemented longer-term corrective solutions rather than repeat quick fixes
- Maintained AGV floor markings and navigation labels, and reported errors to logistics management
- Corrected load positions and maintained a clean, safe working environment

Machine Mechanic — *Daechang SEAT, Slovakia*

December 2020 – February 2021

- Maintained and repaired Hyundai welding and laser robots, diagnosing complex electrical, mechanical, and software-related faults
- Installed and configured sensors and safety devices to improve system reliability, documenting all repairs to quality and safety standards
- Performed robot teaching, alignment, and process verification to protect production accuracy and part quality

Machine Mechanic — *Lear, Hranice, Czech Republic*

December 2019 – December 2020

- Repaired and maintained ABB welding robots and managed CNC machinery repairs
- Reduced downtime by tracing faults to root cause quickly and implementing permanent fixes instead of temporary workarounds
- Installed sensors, organised documentation of welding procedures, and ran continuous equipment monitoring

Mechanic & Programmer — *DAS Welding, Hranice, Czech Republic*

January 2018 – November 2018

- Programmed, modified, and optimised industrial welding robot programs to improve productivity and weld consistency
- Adjusted robot paths, welding parameters, and cycle sequences to raise quality standards and cut cycle time
- Supported installation, commissioning, and startup of new robotic welding equipment, including testing during production launches
- Repaired press machinery and managed sensor installation and quality documentation

Machine Operator & Mechanic — *Koyo Bearings, Olomouc, Czech Republic*

January 2017 – December 2017

- Operated and maintained grinding machines to millimetre-level tolerances for high-precision bearing manufacturing
- Interpreted technical drawings and recorded production data in Oracle in line with quality standards
- Monitored production processes to spot efficiency and waste-reduction opportunities, and helped troubleshoot output-quality issues with the QC team

Supervisor & Mechanic — *ShinHeung (SHC CZ), Hranice, Czech Republic*

2010 – 2016

- Led a team of mechanics overseeing YASKAWA robot programming, synchronisation, and maintenance scheduling across the production floor
- Investigated production issues and implemented corrective actions that cut downtime and reduced quality defects
- Prepared daily production reports and communicated directly with Korean management on process control and repair priorities
- Tracked key performance indicators and built improvement strategies to raise operational efficiency
- Managed spare-parts ordering, sensor installation, pneumatics, and preventive maintenance programmes
- Recognised for strong team management and quality improvements — written reference on file (January 2017)

Security Officer — *Sicret Security*

2007 – 2009

- Provided access control, concierge services, and patrol duties to ensure asset and personnel safety

Machine Operator — *Ad. Lepenka, Serbia*

2000 – 2006

- Operated carton box production machines
- Proposed and helped implement the transition from paper records to an Oracle database, improving record accuracy and cutting administrative workload

- Analysed workflow inefficiencies and recommended process changes that streamlined coordination between production and administration

EDUCATION & CERTIFICATIONS

- KUKA Basic Training – KRC4 Controller (Cert. RobSys_KRC4_basic_003/2025) – Robotic Systems s.r.o., March–April 2025
- Robot Programming Course – January–May 2015
- Car Mechanic – Vocational High School, Serbia (1997–1999)

HOBBIES & INTERESTS

- Data Analytics & Business Intelligence – learning data analysis techniques using Excel, Power BI, SQL, and AI-assisted tools to identify trends and support business decision-making
- Artificial Intelligence & Automation – exploring AI technologies, machine learning concepts, automation workflows, and their applications in manufacturing and business operations
- Website Development & Digital Projects – creating and managing websites, learning SEO optimisation, user experience improvements, and digital content strategies
- GitHub & Technology Projects – developing and testing personal technology projects, learning version control, and exploring open-source software solutions
- Pinterest Marketing & Content Strategy – creating visual marketing campaigns, analysing audience engagement, and optimising content for organic traffic growth
- Continuous Learning & Technical Development – staying current on emerging technologies, industrial automation trends, robotics, and digital transformation practices
- Process Improvement & Problem Solving – passionate about identifying efficiencies, improving workflows, and implementing practical solutions to technical challenges
